Pitch Report

MedMind AI

PROBLEM

Healthcare professionals spend nearly 40% of their time on documentation, patient record management, and administrative tasks instead of patient care. Delayed diagnoses, physician burnout, and fragmented medical data reduce efficiency and negatively impact patient outcomes. Smaller hospitals and clinics often cannot afford advanced AI-powered clinical decision support systems.

SOLUTION

MedMind AI is an AI-powered clinical assistant that helps healthcare providers automate documentation, summarize patient history, generate clinical notes, suggest evidence-based diagnoses, identify potential drug interactions, and integrate seamlessly with existing Electronic Health Record (EHR) systems. Our platform reduces administrative workload while improving diagnostic efficiency and patient care. We have completed a working MVP deployed in five pilot clinics, assisting over 8,000 patient consultations with 96% physician satisfaction while reducing documentation time by 65%.

REVENUE MODEL

MedMind AI operates as a SaaS platform with subscription plans ranging from \$500 to \$3,000 per clinic per month, enterprise licensing for hospital networks, API access for healthcare software providers, AI-powered analytics, and premium clinical decision support modules. Our software delivers approximately 82% gross margins with highly predictable recurring revenue.

TARGET AUDIENCE

Primary customers include hospitals, private clinics, telemedicine providers, diagnostic centers, and healthcare networks worldwide. The global AI healthcare market exceeds \$180 billion and continues growing rapidly as healthcare providers adopt AI to improve efficiency, reduce costs, and enhance patient outcomes. Our goal is to serve 1,000 healthcare organizations within five years.
