82	88	74	70
Customer Clarity	Problem Severity	PMF Potential	MVP Readiness

Extracted from: Startup Validation Report — Smart Self-Ordering Kiosk Ecosystem. Problem: Queue wait times, labor costs, order errors, zero analytics. Customers: Independent restaurants & cafes. Competitors: Toast, Square, Oracle MICROS, Lightspeed, Flipdish.

01 · EXECUTIVE SUMMARY

Dimension	Finding	Status
Startup Idea	Smart self-ordering kiosk ecosystem: payments + KDS + analytics	Clear
Core Problem	SMB restaurants lack affordable, all-in-one kiosk tech	Critical Pain
Target Customer	Independent restaurant/cafe owner-operators, 1–3 locations	Defined
Validation	Prototype ready; no live pilots or paying customers yet	Pre-revenue
Competitor Gap	No SMB-priced integrated kiosk+KDS+analytics solution exists	Real gap
MVP Priority	Software-first: self-ordering UI + cloud dashboard + basic KDS	Actionable
Overall Signal	Strong demand signal — high problem severity + large underserved market	GO

Bottom Line: The problem is real, large, and structurally underserved. Your prototype gives you a 30-day window to convert discovery conversations into pilot deployments before a well-funded competitor spots the same gap. Build the minimum sellable product — not the full vision — and charge for it.

02 · IDEAL CUSTOMER PROFILE (ICP)

Attribute	Description
Business Type	Independent restaurant, fast-casual cafe, food court stall (NOT chains)
Size	5–50 staff · 1–3 locations · 100–800 orders/day
Revenue	\$150K–\$2M USD annual turnover
Tech Savviness	Uses smartphone + WhatsApp; has basic POS; open to tech if ROI is clear
Pain Level	Actively experiencing queue problems, high cashier costs, or order errors
Decision Maker	Owner-operator — decides alone, quickly, based on trust + ROI
Budget Signal	Spends \$100–\$350/month on software if payback < 90 days is demonstrated
Trigger Event	New opening, staff quit, nearby competitor got a kiosk, bad review
Geography P1	India (Tier 1 cities), UAE, Singapore, UK, Australia, Canada

03 · BUYER PERSONA — 'The Stretched Owner'

Name: Arjun / Maria / Mei Lin Age: 30–48 Role: Owner-Operator	Goals: Grow revenue, reduce staff dependency, keep customers happy, find time for family	Channels: Instagram, WhatsApp, local F&B; groups, peer referrals, trade expos
Daily Frustrations: Cashier no-shows, wrong tickets, lost orders, no idea which dish sells best	Buys When: Sees ROI calc, gets a referral from a peer, trial is risk-free, setup takes < 1 hour	Key Quote: <i>'I don't have time to learn complicated tech. Just show me it works and saves me money.'</i>

04 · TOP 10 CUSTOMER PAIN POINTS

Ranked by severity × willingness to pay

#	Pain Point	Severity	WTP	MVP Implication
1	Queue abandonment / long wait times	Critical	High	Core kiosk UI — P0
2	Cashier wages + high staff turnover	Critical	High	Self-ordering reduces headcount
3	Wrong orders -> food waste + customer complaints	High	High	Digital order relay to KDS
4	Zero insight on peak hours, top dishes, revenue	High	Med	Cloud dashboard — P1
5	Manual kitchen tickets — slow, error-prone	High	Med	KDS integration — P1
6	Missing upsell opportunities at the counter	Medium	Med	Upsell prompts on kiosk
7	Cash handling errors and theft risk	Medium	Low	Digital payments — P0
8	No loyalty program / repeat customer data	Medium	Low	CRM layer — future pivot
9	Difficulty updating menus / prices quickly	Medium	Low	Cloud menu manager — P1
10	Poor mobile ordering for takeaway customers	Low	Low	Mobile ordering — future

05 · CUSTOMER JOURNEY MAP

Stage	Owner Action	Emotion	Your Touchpoint	MVP Goal
Awareness	Sees competitor kiosk; reads a WhatsApp group tip; attends expo	Curious	Peer referral, LinkedIn demo video, SEO	Create desire
Consideration	Googles 'affordable restaurant kiosk'; watches your demo reel	Evaluating	Landing page, YouTube walkthrough, blog	Build trust
Intent	Requests a demo or free pilot via WhatsApp / website form	Cautious	Demo call, live prototype walkthrough	Remove risk
Purchase	Signs pilot agreement; hardware installed; staff trained	Anxious	30-min setup, video guide, on-call support	Ensure success
Retention	Reviews dashboard weekly; sees ROI in 30-45 days	Satisfied	Weekly digest email, ROI snapshot report	Prove value
Advocacy	Tells 2 other cafe owner friends; posts Google review	Loyal	Referral discount, case study feature	Drive growth

06 · KEY OBJECTIONS & BUYING TRIGGERS

Objection	Root Fear	Counter-Move
"It's too expensive"	ROI uncertainty	Show 90-day payback calc: avg ticket up 15%, 1 less cashier = \$1,200/mo saved
"It's too complex to set up"	Tech anxiety	Guarantee 30-minute setup; provide video + WhatsApp support
"What if it breaks?"	Operational risk	Offer offline mode + 4-hour SLA; share uptime stats from prototype testing
"My customers won't use it"	Change resistance	Show Tillster data: 68% prefer kiosk when wait > 3 min
"I'll think about it"	No urgency	Offer limited pilot slots; create scarcity — 'Only 5 pilots this month'
"I already have a POS"	Switching cost fear	Position as complement, not replacement — integrates alongside existing POS

Buying Trigger	Probability	How to Activate
Staff member quits unexpectedly	Very High	Be present in local restaurant owner groups when this topic comes up
Competitor nearby installs a kiosk	High	Monitor Google Maps for new kiosk installs; reach out to neighbours
Received 1-star review about slow service	High	Monitor Google Reviews in target area; offer solution proactively
Opening a new location / renovation	High	Partner with fit-out contractors and POS resellers for referrals
Owner attended a food tech expo	Medium	Exhibit at or attend HORECA, FoodTech India, Gulf Food, Fine Food AU

07 · MVP RECOMMENDATION

What to Build First

Priority	Feature	Rationale	Timeline
P0 — Core	Self-ordering kiosk UI (tablet/touchscreen)	Directly addresses #1 pain; demo-able today	Now — Week 2
P0 — Core	Integrated digital payments (Stripe/Razorpay)	Required for any transaction to complete	Week 1–2
P0 — Core	Basic kitchen display (KDS) ticket view	Eliminates manual relay; closes pain point #3	Week 2–3
P1 — Next	Cloud dashboard: daily sales + top items	Creates stickiness; justifies SaaS subscription	Week 3–4
P1 — Next	Menu management portal (add/edit items)	Removes biggest post-launch friction point	Week 3–4
P2 — Later	Upsell / combo suggestion engine	Revenue uplift; nice-to-have at launch	Month 2

What NOT to Build Yet

Feature to Defer	Why
Loyalty / CRM system	Nice-to-have; adds complexity; build after first 10 paying customers
Mobile app for customers	Out of scope for MVP; focus on in-store ordering first
Multi-location enterprise dashboard	Your ICP has 1–3 locations; over-engineering for current segment
Custom hardware manufacturing	Source off-the-shelf Android kiosk hardware; don't manufacture in Year 1
AI-powered demand forecasting	Needs 6+ months of data; build analytics basics first
Built-in payment processing	Partner with Stripe/Razorpay; don't build from scratch — regulatory nightmare

Success Metrics (First 90 Days)

Metric	Target	Why It Matters
Pilot restaurants signed	5+	Validation that product solves a real problem
Avg orders per day per kiosk	50+ orders/day	Proves the kiosk is actively used, not abandoned
Avg ticket size increase	+10–15%	Validates upsell functionality ROI claim
Customer churn (pilot -> paid)	< 20%	Confirms willingness to pay after free trial
Setup time per restaurant	< 60 minutes	Validates simplicity promise; enables word-of-mouth
NPS from pilot owners	50+	Predicts referral-driven growth potential

08 · MoSCoW PRIORITISATION

Feature prioritisation for first shippable version

MUST HAVE	SHOULD HAVE	COULD HAVE	WON'T HAVE
• Self-ordering kiosk touch UI • Digital payment integration • Basic KDS (kitchen ticket display) • Cloud menu management • Order history & daily summary	• Upsell / combo prompts • Receipt printing / email • Multi-language menu support • Staff override / manual order • Basic analytics dashboard	• Customer loyalty points • QR code ordering (table) • Inventory depletion alerts • Promo & discount codes • Staff performance tracking	• AI demand forecasting • Custom hardware build • Multi-country tax engine • Mobile customer app • Enterprise API integrations

09 · PRICING HYPOTHESIS

Tier	Price	What's Included	Target Customer
Starter	\$99/mo + hardware	1 kiosk, KDS, basic dashboard, email support	Micro cafes, 1-location stalls
Growth	\$199/mo + hardware	Up to 3 kiosks, full analytics, WhatsApp support	Growing restaurants, 1–2 locations
Pro	\$349/mo + hardware	Unlimited kiosks, advanced analytics, SLA support	Busy QSRs, 2–3 locations
Hardware	\$1,500–\$2,500	Off-the-shelf Android kiosk (one-time or 12-mo lease)	All tiers

Pricing Strategy: Lead with a 30-day FREE pilot (no hardware commitment). After 30 days, convert to paid SaaS. Offer hardware leasing at \$150/month to reduce upfront friction. Target payback < 90 days — calculate and show this in every sales conversation.

10 · TOP 5 RISKS

#	Risk	Level	Mitigation
1	Founder bandwidth — side project pace too slow to capture market window	High	Define MVP scope to 4 features; set weekly shipping targets
2	Zero F&B; network — hard to get first pilots without warm intros	Med	Join 5 restaurant owner communities; offer referral incentives
3	Hardware downtime during lunch/dinner rush erodes trust instantly	Med	Build offline mode; test hardware stress at 100+ orders/hour
4	Enterprise competitor (Toast, Square) launches SMB kiosk module	Med	Move fast; lock early customers on annual contracts
5	Payment regulation complexity in multi-country rollout	Low	Launch in 1 country first; use Stripe Connect for global expansion

11 · 30-DAY MVP ACTION PLAN

Days	Sprint Goal	Key Actions	Done When
1–3	Scope lock	Write 1-page MVP spec; list 5 must-have features only; kill everything else	Spec doc finalised
4–7	Customer discovery	5 in-person visits to target restaurants; record pain points verbatim	5 interviews done
8–12	Prototype polish	Fix top 3 UX issues from discovery; test kiosk on a real Android touchscreen	Runs on hardware
13–15	Outreach	WhatsApp 30 restaurant owners; offer 'free 30-day pilot — 5 slots only'	3+ interested replies
16–20	First pilot	Deploy at 1 restaurant; sit there for 2 hours on day 1; fix live issues	Kiosk live + orders flowing
21–25	Data collection	Track: orders/day, ticket size, setup feedback, staff adoption rate	2-week data snapshot
26–28	ROI case study	Calculate revenue uplift + labour saving for pilot restaurant; make 1-pager	Case study ready to share
29–30	Convert to paid	Present ROI to pilot owner; offer paid plan; use case study with 3 new prospects	1st paid conversation

12 · FOUNDER ACTION SHEET — Top 10 Next Actions

TODAY	Write a 1-page MVP scope doc — exactly 5 features, nothing more
TODAY	Create a WhatsApp Business profile for your product with a clear pitch message
Day 2	List 30 target restaurants in your city with owner names + contact info
Day 3	Join 3 restaurant owner Facebook/WhatsApp groups — contribute, don't spam
Day 4–5	Visit 5 restaurants in person; ask 'What's your biggest daily headache?'
Day 6	Create a 90-second screen-recording demo of your kiosk prototype
Day 7	Build a simple landing page: headline, 3 bullet benefits, 'Request Free Pilot' form
Day 8	Post your demo video on LinkedIn with the line: 'Looking for 5 restaurants to pilot this free'
Day 10	Have your first demo call; ask for referrals regardless of outcome
Day 14	Deploy at 1 pilot; collect NPS feedback on Day 1, Day 7, and Day 14

13 · SCORES & FINAL VERDICT

Score Breakdown (0–100)

82	88	74	70
Customer Clarity	Problem Severity	PMF Potential	MVP Readiness

STRONG DEMAND SIGNAL — BUILD & VALIDATE NOW

Criterion	Score	Verdict
Is the problem severe enough that people will pay to solve it?	88/100	YES — Critical pain
Is the ICP specific enough to find and reach?	82/100	YES — Owner-operators identifiable
Does a clear market gap exist vs. competitors?	85/100	YES — No SMB-priced all-in-one exists
Is the MVP scope achievable as a side project?	65/100	CONDITIONALLY — Requires tight scope
Is there a realistic path to first revenue in 60 days?	70/100	YES — With aggressive pilot outreach

Final Verdict: The problem is severe, the market is large, and your prototype gives you a real head start. The only thing standing between you and your first paying customer is 5 in-person conversations with restaurant owners. Stop building. Start selling the prototype you have. Every week without a pilot is a week of free validation time wasted.
